Building Community Resilience: Extreme Heat Strategies and Funding from Los Angeles and Sacramento (Part 1)

April 18, 2022 at 1:00-2:30

Extreme heat is a serious challenge facing California, with many cities set to experience Phoenix-like temperatures in the coming decades. But we have solutions that can be implemented today to cool our communities, reduce greenhouse gas emissions, and improve public health and equity. Join the Los Angeles Regional Collaborative for Climate Action & Sustainability (LARC) and the Capital Region Climate Readiness Collaborative (CRCRC) for a conversation about some of these extreme heat interventions in the Los Angeles and Capital Region. This is the first of a two-part series—the second webinar on May 16, 2022, will focus on social solutions and social infrastructure (including trees!) to support equity and community resilience. This event is open to the public and you do not need to be a member of LARC or CRCRC to attend and participate.
